

HAWKEYE · 16 JANUARY 2027

How much data does it use?

For parties and groups budgeting mobile data for polling-unit agents on 16 January. The figures are per agent.

USE	DATA
Reporting the Presidential, Senate and House results only	About 2 MB (about 0.4 MB of compressed photos per report, plus retries)
Reporting, plus checking results a few times (2–3 hours with the app open)	About 10–15 MB
Heavy use: following results and maps all evening	About 30–50 MB
Each optional incident report with video	1–12 MB per video in the Hawkeye app; up to 25 MB per video in Hawkeye Lite or a browser. At most 2 videos per report.

Our advice: a 100 MB bundle per agent covers the day with a wide margin. 50 MB is enough for reporting plus moderate checking.

Before the day, on Wi-Fi: install the app, do a practice run, and let the offline polling-unit list download.

Why so little: every photo is compressed on the phone before it is sent, and the Hawkeye app stops refreshing when it is in the background.

Reporting from a web browser instead of an app also downloads about 7 MB of sheet-reading tools the first time. The apps don't need them.

These are estimates from lab measurements. We will measure them again on the National Practice Day, 12 December 2026, and update this page.
